

DataLinker

Making Connections with Adobe InDesign®

Connect data quickly and efficiently to Adobe InDesign CS-2 documents with Teacup Software's **DataLinker**. This intuitive, easy-to-use plug-in allows you to link data anywhere on an InDesign page, or merge data into a document and into tables too. Once your data is linked, you can update from the database with the simple click of a button.

With **DataLinker's** powerful styling abilities, you can have your image, barcode, currency or text data formatted automatically as it flows in. An optional ODBC add-on plug-in allows you to link to ODBC databases and view selected data with SQL queries. You can automatically merge across multiple pages, and it's easy to have numerous data sources linked to one document. For anyone who needs to connect directly to external data such as price lists, product catalogs, budgets or annual reports, **DataLinker** will become an indispensable and timesaving tool.

Available online at www.teacupsoftware.com!

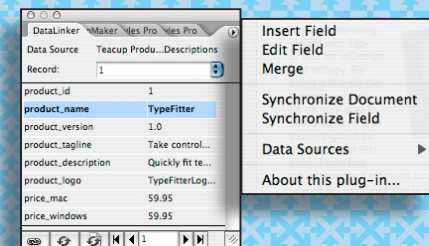

DataLinker retail Price: \$299 USD

ODBC Add-on retail price: \$299 USD

Powerful Merge Ability

Merge data into placeholders, creating new pages as needed. Hundreds of pages can be generated on the fly with the click of a button!

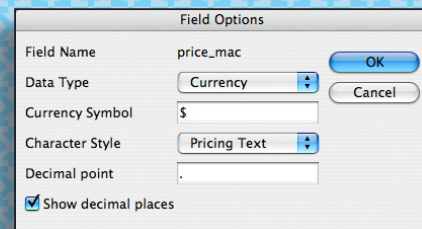

Straightforward Control

Simple to use, one palette controls all of the plug-in's capabilities and with just a few clicks, data is connected.

Barcodes and table integration

With Teacup's BarcodeMaker plug-in, use **DataLinker** to automatically create barcodes from a database. It's easy to merge into tables with **DataLinker**, and users of TableStyles and CellStyles will be able to have automatic formatting too.

Formatting flexibility

Automatically format data as it is placed into a document according to settings created for each field. Format fields as currency, percentage, barcode, image, alphanumeric, and more.
